

## COMPOSITION :

Each 1 ml contains :

Progesterone.....

.....25mg

# PROVET - 100ml

Injection Solution

## DESCRIPTION & INDICATION:

Progesterone binds to specific cytoplasmic receptors, which then enter the nucleus and alter the transcription of DNA leading to alterations in cellular metabolism.

Progesterone normally produced by the corpus luteum and by the placenta of pregnant mares. Progesterone is commonly prescribed for pregnancy maintenance, estrus synchronization, estrus suppression, and behavior modification. ProVet injection is a progesterone treatment which assists in the prevention of threatened abortion and in the reduction of embryonic mortality in dogs, cats, horses and cattle.

## CONTRA-INDICATIONS:

The product must not be used in prepubescent animals. Use before the expiration date. Do not apply to animals that are hypersensitive to active materials.

## WITHDRAWAL PERIOD:
